

CURRICULUM OVERVIEW

Game Creator Path

Build 3 Real Games

A complete, project-driven journey from a first Roblox build to a polished, published game. Students don't just play games — they design them, script them, and ship three real, playable games friends can actually try.

Courses

24

Lessons Total

3

Real Games

10–18

Age Range

LEARNING PROGRESSION

01

Roblox World Builder

Build and publish a multiplayer Roblox game from scratch.

02

Python Arcade Games

Build 2D games using Python and Pygame — the real language of game dev.

03

Advanced Game Design

Design, polish, and publish a complete game with professional quality.

Learn by shipping, not by watching. Every lesson pairs a real concept with a real, playable build — no shallow demos, no unfinished prototypes.

A portfolio, not just a certificate. Students finish with three real games they can publish, share, and keep building on.

COURSE 01 · LESSONS 1–8

Roblox World Builder

Build and publish a multiplayer Roblox game from scratch

[Roblox Studio](#)[Lua scripting](#)[Roblox DevHub](#)

OVERVIEW

Your child goes from zero to a working multiplayer Roblox game. They design the world, write the Lua code, set up game logic, and publish it so friends can actually play it.

PORTFOLIO PROJECTS

- Obstacle course with scoring
- Multiplayer arena with teams
- Custom game world with NPCs

WHY IT MATTERS

Roblox is where millions of players already spend time — and where they build. Scripting in Lua teaches real programming logic while students create something their friends can join and play immediately.

LESSON BREAKDOWN

1 Roblox Studio setup and first build

2 Scripting basics in Lua

3 Player mechanics and movement

4 Game logic and scoring systems

5 Multiplayer networking basics

6 World design and aesthetics

7 Testing, debugging, polishing

8 Publishing and sharing with friends

COURSE 02 · LESSONS 1–8

Python Arcade Games

Build 2D games using Python and Pygame

Python 3

Pygame

VS Code

OVERVIEW

After Roblox, your child levels up to Python, the real language used by professional game developers and AI engineers. They build 2D arcade games from scratch.

PORTFOLIO PROJECTS

- Space shooter with enemies
- Maze runner with timer
- Brick-breaker clone

WHY IT MATTERS

Every real game — from indie hits to AAA titles — runs on the same fundamentals taught here: a game loop, sprites, collision detection, and state management. Pygame makes those ideas concrete and visible.

LESSON BREAKDOWN

- 1 Python basics for game development
- 2 Pygame setup and game loop
- 3 Sprites, images, and movement
- 4 Collision detection
- 5 Enemies, AI behavior, and scoring
- 6 Sound effects and music
- 7 Game states (menu, play, game over)
- 8 Packaging and sharing your game

COURSE 03 · LESSONS 1–8

Advanced Game Design

Design, polish, and publish a complete game with professional quality

Python / Pygame

Unity Basics

Game Design Frameworks

OVERVIEW

The capstone course. Your child applies everything they know to design and ship a complete game — proper level design, a polished UI, and real playtesters giving feedback.

PORTFOLIO PROJECTS

- RPG adventure with storyline
- Physics-based puzzle game
- Published portfolio game

WHY IT MATTERS

Making a fun game takes more than code — it takes design thinking, iteration, and real player feedback. This course teaches the professional workflow behind every shipped title, from prototype to playtested, polished release.

LESSON BREAKDOWN

- 1 Game design fundamentals (loops, balance, flow)
- 2 Level design theory and practice
- 3 Advanced Python: classes and game architecture
- 4 Unity introduction and first scene
- 5 UI design and player experience
- 6 Playtesting and iteration
- 7 Performance optimization
- 8 Final polish and portfolio submission

The Complete Journey

Across 3 courses and 24 lessons, students progress from their first Roblox build to a fully designed and polished game — walking away with three real, playable games for their portfolio.

COURSE 01

Roblox World Builder

- Lua scripting fundamentals
- Player mechanics & game logic
- Multiplayer networking basics
- Publishing a live Roblox game

COURSE 02

Python Arcade Games

- Pygame setup & the game loop
- Sprites, movement & collisions
- Enemy AI & scoring systems
- Packaging a complete 2D game

COURSE 03

Advanced Game Design

- Level design & game balance
- Advanced Python architecture
- Unity basics & UI design
- Playtesting & final publishing

WHAT STUDENTS BUILD

1

Roblox Portfolio

Obstacle course with scoring ·
Multiplayer arena with teams ·
Custom game world with NPCs

2

Python Games Portfolio

Space shooter with enemies ·
Maze runner with timer · Brick-
breaker clone

3

Advanced Design Portfolio

RPG adventure with storyline ·
Physics-based puzzle game ·
Published portfolio game

BY THE END OF THE PATH, STUDENTS CAN

Script and publish a working multiplayer game in Roblox Studio using Lua.

Build a complete 2D arcade game in Python, including sprites, collisions, and sound.

Design, playtest, and publish a polished, professional-quality game of their own.

Ready to start building?

All lessons and projects are taught live by an expert Lumexa instructor.
