

FLAGSHIP CURRICULUM · AGES 12–18

Lumexa Odyssey

72 Lessons.

One Big Launchpad.

The first path every new student takes. Odyssey is a guided journey across nine real courses — games, websites, apps, data, and AI — giving your child broad, hands-on exposure before they choose a specialty. No prior coding experience needed.

Stages

THE ODYSSEY JOURNEY

1

Stage 1 — Foundation

Scratch, Python basics, and first arcade games — building coding instincts from zero.

2

Stage 2 — Create & Apply

Real websites, a professional online identity, and interactive JavaScript projects.

3

Stage 3 — Explore & Advance

Data, AI foundations, and 3D world building — a taste of every advanced direction.

After Odyssey: every student chooses one specialized 24-lesson pathway to go deep — Game Creator, AI Builder, Web Developer, Data Scientist, or Digital Independence. Odyssey builds breadth and excitement; the specialized path builds real mastery.

STAGE 1 OF 3 · LESSONS 1–24

Foundation

Every great builder starts somewhere. Stage 1 turns total beginners into confident, independent coders through games and playful logic.

01

Scratch Adventures

Students build their first interactive stories and games in Scratch's drag-and-drop editor — learning sequencing, loops, and events through play.

8 Lessons

Scratch

No experience needed

02

Python for Young Builders

A gentle, guided introduction to real text-based programming in Python — variables, conditionals, and loops, applied to small practical tools.

8 Lessons

Python

First real code

03

Python Arcade Games

Students apply their new Python skills to build real, playable arcade-style games — turning foundational logic into something they can show off.

8 Lessons

Python

Game development

STAGE 2 OF 3 · LESSONS 25–48

Create & Apply

With coding fundamentals in place, students start building real things for the real internet — and start presenting themselves professionally along the way.

04

HTML and CSS Mastery

Students learn to structure and style real webpages from scratch — the foundational language of every website on the internet.

8 Lessons

HTML / CSS

Web design basics

05

Build Your Digital Identity

Students build a live personal portfolio site and learn to present their growing skills honestly and professionally online.

8 Lessons

Portfolio

Professional identity

06

JavaScript and Interactivity

Students bring their websites to life — adding buttons, animations, and interactive logic using real JavaScript.

8 Lessons

JavaScript

Interactive web

STAGE 3 OF 3 · LESSONS 49–72

Explore & Advance

A guided tour of the paths ahead — data, artificial intelligence, and 3D world building — so students choose their specialty with real experience, not guesswork.

07

Python for Data

Students learn to organize, analyze, and visualize real data using Python — a first taste of the data scientist's toolkit.

8 Lessons

Python

Data basics

08

Python and AI Foundations

An approachable introduction to how artificial intelligence actually works — students build and experiment with simple, real AI models.

8 Lessons

Python

AI foundations

09

Roblox World Builder

Students design and script an interactive 3D world in Roblox Studio — combining creativity, logic, and game design in one capstone-style course.

8 Lessons

Roblox Studio

3D & game design

The Complete Journey

Across 9 courses and 72 lessons, students move from total beginner to confident, well-rounded builder — with hands-on experience across games, the web, data, and AI, all before choosing where to specialize.

STAGE 1

Foundation

- Scratch Adventures
- Python for Young Builders
- Python Arcade Games

STAGE 2

Create & Apply

- HTML and CSS Mastery
- Build Your Digital Identity
- JavaScript and Interactivity

STAGE 3

Explore & Advance

- Python for Data
- Python and AI Foundations
- Roblox World Builder

What Comes Next

 **Game Creator**

 **AI Builder**

 **Web Developer**

 **Data Scientist**

 **Digital Independence**

BY THE END OF ODYSSEY, STUDENTS CAN

- ✓ Write and debug real code across multiple languages — Scratch, Python, HTML/CSS, and JavaScript.
- ✓ Build and show off real, finished projects: games, a live website, a personal portfolio, and a 3D world.
- ✓ Confidently choose a specialized 24-lesson pathway based on real hands-on experience, not guesswork.

The best first step into coding, for any beginner.

All lessons are taught live by an expert Lumexa instructor.
